

Connected grain cart weighing solution designed for automatic data upload and accurate harvest reports

Connected Grain Cart Weighing

The Topcon Smart Cart solution, comprised of the Digi-Star GT 560 indicator and CL-55 cloud connectivity device, provides weight-verified, geo-referenced data that automatically uploads and post-calibrates with yield monitor data in TAP. The system offers a leading approach for accurate harvest reports.

Powerful agronomic insights begin with highly accurate yield data. Standard yield monitors have been plagued with problems for years, but with TAP you can now take harvest reports to the next level, improving accuracy from 80% to nearly 99%. We call it HD Yield.

TAP Topcon Agriculture Platform Organize. Visualize. Prescribe.

The modern path to precision starts with data organization. TAP not only ingests from virtually any source, but its drag and drop interface with automated field-linking also makes the process efficient and painless. Establish geo-boundaries, push in your data and it does the rest.
